Save Point

Visual Theming

AlotaNotes Quiz App · Prepared for Logan Young, Save Point Limited · 27 October 2026

`lib/theme/theme.dart` is the single source of truth for the app's look; `lib/theme/widgets.dart` holds the few branded building blocks a `ThemeData` can't express. Screens use the named constants and widgets, never raw hex codes.

Source

The tokens are taken directly from the live savepoint.co.nz stylesheet (its CSS custom properties, fetched in October 2026), not guessed. The site is a light, "neo-brutalist" retro design:

Constant	Hex	Site token	Used for
`colorPaper`	`#F7F4EF`	`--paper`	Page background
`colorPaperRaised`	`#FFFFFF`	`--paper-raised`	Cards, inputs
`colorPaperTint`	`#EFE8F2`	`--paper-tint`	Quiet fills, tracks, dividers
`colorInk`	`#221C27`	`--ink`	Text, 3px borders, button shadows
`colorInkSoft`	`#4A4352`	`--ink-soft`	Secondary text
`colorPlum`	`#2B2233`	`--plum`	App bar, nav bar, hero panels
`colorOnPlumSoft`	`#E4DCEA`	`--on-plum-soft`	Secondary text on plum
`colorPurple`	`#B791C2`	`--purple`	Pixel shadows, app-bar underline
`colorPurpleDeep`	`#5B3D6B`	`--purple-deep`	Primary accent, links, labels
`colorYellow`	`#EECC67`	`--yellow`	Primary buttons, selection, "due"
`colorBlue`	`#699FD5`	`--blue`	"Attempted", problem stats
`colorGreen`	`#82C88A`	`--green`	"Solved", easy, correct answers
`colorDanger`	`#B3261E`	(none)	Errors, wrong answers

`colorDanger` is the only colour not on the site, which never shows an error state.

Shape and depth

- Square corners everywhere, with 3px ink borders (`inkBorder`).

- No blurred elevation. Depth is a solid offset "pixel shadow" (`pixelShadow()` , the site's `--pixel-shadow: 6px 6px 0 var(--purple)`).
- The app bar is plum with a 4px purple underline and the nav bar is plum with a yellow selected tab, like the site's header.
- Primary actions use `PixelButton` : yellow, ink border, 4px ink shadow, pressing in to 2px while held (the site's `button:hover` effect).
- `PixelCard` is a white panel with an ink border and an offset shadow. It wraps its content in a transparent `Material` so ink from tiles inside paints correctly. The shadow colour carries meaning: a yellow shadow on a tracker card means it's due.

Fonts

Bundled in `assets/fonts/` (SIL OFL, licences alongside), so text never depends on a network fetch:

- **Chakra Petch** (SemiBold, Bold): headings, app-bar titles, buttons, chips, pills and section labels (`fontDisplay`).
- **Figtree** (Regular, Medium, SemiBold, Bold): body text (`fontBody` , the theme default).

Code (problem solutions) uses the platform `monospace` family.

Widgets in `widgets.dart`

`PixelCard` , `PixelButton` , `Pill` , `DifficultyPill` , `StatusPill` , `StatTile` , `SectionLabel` (uppercase eyebrow text), `EmptyState` , `RetentionMeter` .

Adding a style

Add it to `buildAppTheme()` using the constants above, or add a small widget to `widgets.dart` if it needs pixel shadows. Don't hardcode hex codes in screens. There is no dark mode, matching the site.
